Screen Capture + Print

© by Infonautics GmbH, Switzerland

Screen Capture + Print is a freeware software for Windows™ and allows to capture the screen content or part of it to the clipboard, to print directly or to save it as a picture.
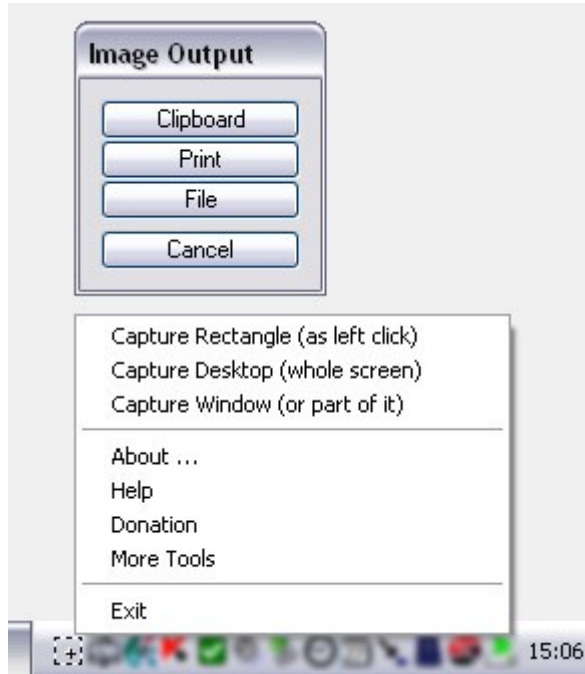

Installation

This program does not have to be installed explicitly (portable application).
Copy the two files „ScreenCapturePrint.exe" and „ScreenCapturePrint.pdf" into a directory of your choice and start the program „ScreenCapturePrint.exe" or the corresponding manual „ScreenCapturePrint.pdf" whenever needed. Add a program shortcut to the Windows Start-up Directory and the software „Screen Capture + Print" will be started with Windows automatically.

Application

The corresponding icon shows up in the taskbar (tray) once the program has been started. Use right mouse click on the icon to show the context menu.

Use left mouse click on the icon or choose „Capture Rectancle" from the context menu in order to capture any part of the screen. Now you can drag a rectangle with the mouse to define the requested screen area.

In order to capture the full screen click on the icon and afterwards once on the desktop or choose „Capture Desktop" from the context menu.

In order to select a single window choose „Capture Window" from the context menu. To show the window including the frame click on the title bar. If the window should be shown without frame click on the appropriate content.

After having selected the requested screen area the captured output can be defined as follows: the image can either be copied to the clipboard for further use in other applications, or it can directly be printed out or saved as a file.

Features

o Capture of any requested screen area
 Click on icon in task bar and use the mouse to drag requested selection.
 Ctrl+Insert can be used to start capturing including open menus and tool tips.
o Capture of full screen
