

# FLV2iTunes Manual<sup>rev1.4</sup>

## About

This is a simple docklet application for converting movies to iTunes and iPod supported format.

You just need to drag and drop movies to it and you just need to wait. It will accept any movies format that are supported by ffmpeg, converts it, and insert the movie into iTunes library.

## Installation

To install FLV2iTunes, just drag FLV2iTunes into the application folder on your mac. If you use it often, you can put a shortcut of FLV2iTunes on your dock.

## Usage

FLV2iTunes is really simple to use.

Just drag folder containing movies or movie files into the application icon.

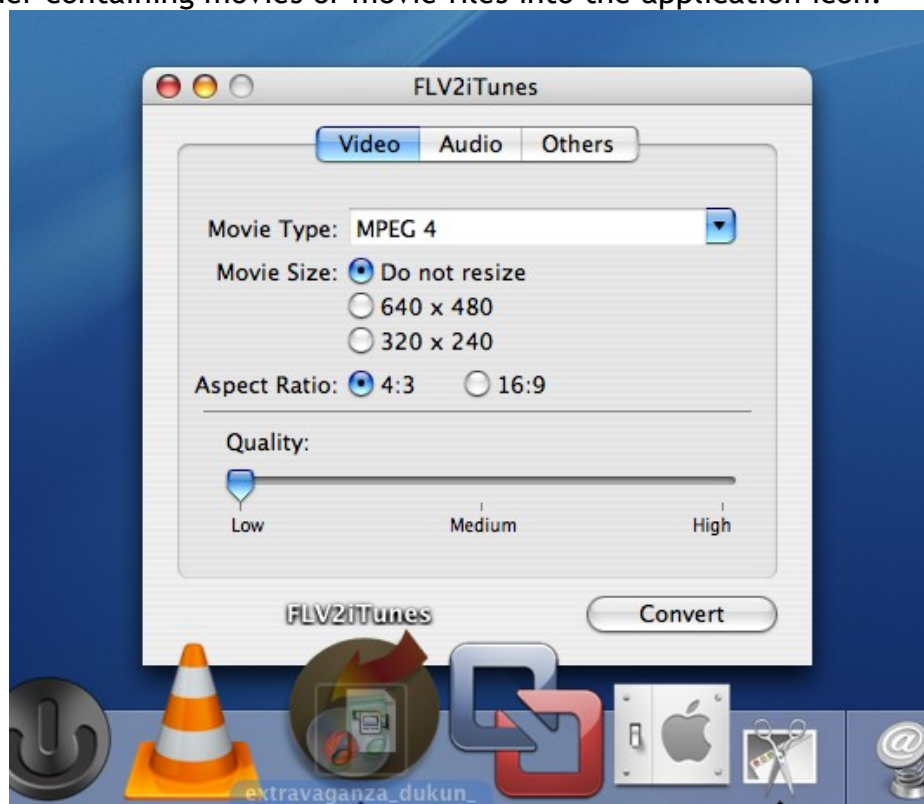

Figure 1. Drag the video files/ folders into FLV2iTunes

Then, a dialog box will appear. You can set the conversion settings from here.

#### Setting Options:

- **Movie Type:**
  - MPEG 4 - Fast to encode
  - H.264 - Slow to encode, but has better compression
- **Movie Size:**
  - You have 3 different options here. It should be self explanatory.
- **Aspect Ratio:**
  - 4:3 - Box
  - 16:9 - Widescreen
- **Video Quality**
  - Use the slider to adjust the video quality of the output
- **Audio Quality**
  - Use the slider to adjust the audio quality of the output
- **Audio Channel**
  - Audio Pass Through - Keep the output's audio channel the same as the source.
  - Force to Stereo - Set the audio channel for the output to stereo. This setting is useful if you're converting video with surround sound for devices that only support stereo.
- **Use Quick Time to Decode**
  - **NOTE:** Use this option only when your movie cannot be decoded by FLV2iTunes because It will take longer time to convert your movie
  - With this option, any movie that plays on your QuickTime will work
- **Use Multiple Threads:**
  - You should enable this feature, if you have dual core or multiple cpu
- **Add to iTunes Library**
  - If you enable this option, FLV2iTunes will automatically copied the final output of the movies into iTunes

- Always display this window before converting
  - If you uncheck this, FLV2iTunes will use the last settings you use and never display the dialog above again. You can always show the dialog again using the Preferences.... menu.

After you finished with the settings, press the Convert button!

**Additional Note:**

For better WMV support, you should use the decode with Quick Time option. You also need to install [Flip4Mac Windows Media® Components for QuickTime](#). You can use the free version, but you need to buy the WMV Player Pro version to remove the watermark on the output video.

Ok, I hope you will find FLV2iTunes useful! Please let me know if you found any bugs or want to suggest additional features by emailing me at [akur@kurniadi.org](mailto:akur@kurniadi.org). If you like FLV2iTunes and want to send donation, please click [here](#)!
