

jMultiFilesAndDirsCopy is my first java swing desktop application.
I'm a j2ee developer so my naturally UI is the web and not the desktop.
To learn more about java desktop programming I'm developing this application.

With **jMultiFilesAndDirsCopy** you can copy multiple files to multiple dirs and much more.
Take a look at my future plans for it.

This application is freeware with no ads for your own purposes.

v 0.9.1.0

a. add:

- files and dirs progress bar indicator in the log window
- import and export of files list from/to xml file
- import and export of dirs list from/to xml file
- import and export of both files and dirs lists from/to xml file
- some button tooltips for helping users

b. fix:

- text scrolling in log window now follows operations in progress

features	add	fix	plan
