INTRODUCTION

This release notes document describes HYDRALOGIX 200 driver version 1.7.106 for Microsoft Windows Vista & Windows 7. The document describes added features, performance improvements, bug fixes and known bugs in this driver version.

HYDRALOGIX 200 RELEASE UPDATES

This chapter describes new features, performance improvements and pending issues for version 1.7.106. In addition there is a detailed description of resolved and open issues for this version.

Changes in version

The following sections list the changes made and issues resolved since driver version 1.7.105

What is new:

- NVIDIA latest drivers issue fixed

Open and known issues in this driver version

The following are the open issues with current driver release:

- Unigine Heaven 2.1 DX11 can take long time to exit
- No support for windowed mode
- It is recommended to connect the display to the stronger GPU
- Running benchmarks while FRAPS application is active may cause crashes (occurs also when HYDRALOGIX driver is disabled)
- 3xGPUs mode performs best with 3 identical GPUs
- Random white screens between the CPU tests in 3DMark Vantage

Installation

Minimum Hard Disk Space

The hard disk space requirements are a minimum of 15 MB for English-only, and 20 MB for International.

Before You Begin

Please uninstall your older driver version before installing 1.7.106 (happens automatically)

Please refer to <http://www.lucidlogix.com/driverdownloads.html> to download the latest available HydraLogix drivers.

Installation Instructions

1. Run the HYDRALOGIX 200 install file to launch the Installation Wizard.
2. Follow the instructions in the Installation Wizard to complete the installation.
3. Click Finish.
4. **Restart the computer**

General Tips

- In all Modes - higher settings result with better performance
 - Turn AA ON
 - Resolution 1920 x1200 or higher is recommended
 - High game settings
- In non-identical A & N modes and in X mode
 - Different graphics card manufacturers – ok (e.g. MSI + Other vendor)
 - Different graphics card memory size and type – ok (e.g. 512MB + 1.76Gb)
 - Overclock and non-overclock graphics cards - ok
 - Multi GPU performance ratio should be between 1:1 and 1:2 – see suggested combinations in Appendix A below
 - It is recommended to connect the display to the stronger GPU

Common mistakes

- Not using latest HYDRALOGIX driver
- Trying to run non-qualified graphics card combinations
- Running non-qualified games

Remark: When a non qualified graphics card combination or game is running – the game will default to the GPU connected to the screen, ensuring the quality of service
